

# Who should teach it and how to teach? — Statistical education in Japan

M.Yasuda

Sep. 2008 at Wroclaw

# Abstract:

Refereing to GAISE project in US, 2003, we empasis that the education of statistics need a experiance of case study and it differs from mathematics.

Statistics is based on mathematical foundations and further application or exploiting notions are important.

# GAISE

Statistical Education in US curriculum and evaluation GAISE project: (Guidelines for Assessment and Instruction in Statistical Education)

- ▶ (1) Contents are decreasing or deleted in High school or in elementary school

# Recent Japanese Education

- ▶ (1) Contents are decreasing or deleted in High school or in elementary school
- ▶ (2) Synthetic or Overall study in elementary school are innovated

# Recent Japanese Education

- ▶ (1) Contents are decreasing or deleted in High school or in elementary school
- ▶ (2) Synthetic or Overall study in elementary school are innovated
- ▶ (3) Revise Guidance of teaching by Central Ministry of Education in Japan, JSPS(Japanese Society of Promotion for Science)

# Some data in Japan –

Nagasaki University of Medicine(Prof. Y.Shibata)

Medical statistics:

- ▶ (1) Data scaling, expression in figure
- ▶ (2) Definition of probability, conditional probability, Bayes theorem
- ▶ (3) Mean and variance etc of distribution
- ▶ (4) Sampling of data, statistical data, Likelihood
- ▶ (5) Fundamental notion of Estimation theory
- ▶ (6) Hypothesis testing
- ▶ (7) Inference of mean value, ratio
- ▶ (8) Independence of test, Curve fitting, Chi square
- ▶ (9) Scattering plot, Coefficient of relation
- ▶ (10) Simple regression analysis

Statistics

(1) Emphasis considering statistical thinking

(2) Data or Phenomenon are important and decrease the theoretical treatment

(3) Promote an active study

GAISE report2003 teaches:

- ▶ (1) Not teach a technic to solve problems, but to get an understanding of fundamental notion, idea, concept.

GAISE report2003 teaches:

- ▶ (1) Not teach a technic to solve problems, but to get an understanding of fundamental notion, idea, concept.
- ▶ (2) Experience in success or disappointment. Try to condier a statistical problem and recognize solutions.

## GAISE report2003 teaches:

- ▶ (1) Not teach a technic to solve problems, but to get an understanding of fundamental notion, idea, concept.
- ▶ (2) Experience in success or disappointment. Try to condier a statistical problem and recognize solutions.
- ▶ (3) Not to induce a formally problem. In college education, it should be teached a fundamental notion of probability, dispersion or distribution. Success story or case of applied in mistake, error should be explaind in a text book.

# Issue for further education;
